The NSW Government funded this project as part of its $300 million Urban Roads Pinch Point Program, which aims to reduce delays, manage congestion and improve travel times on Sydney's major roads.

Roads and Maritime Services has now completed improvements at the intersection of Victoria Road and Bowden Street.

Completed works

The completed works include:

- extending the eastbound right turn lane on Victoria Road southbound to 45 metres
- replacing Victoria Road turning lane median and road marking
- removing left turn traffic lights filter from Bowden Street northbound
- removing two signs that read “Left turn on red permitted after stopping”
- modifying existing pedestrian crossings on both sides of Bowden Street
- relocating the pedestrian crossing on Victoria Road from the eastern side of the intersection to the western side
- undertaking pavement marking, kerb, pram ramps and footpath works to support the new pedestrian crossing.

The improved intersection was opened to traffic on Friday 25 May 2018.

Key benefits

The key benefits to the community included improving traffic flow, travel times and safety for all road users by:

- preventing vehicles from spilling out of the right turn lane and blocking one of the through lanes
- eliminating the loss of green light time for right turning traffic along Bowden Street northbound when waiting for pedestrians crossing the intersection.

Thank you

We appreciate your patience while we delivered this important project.
